allocating within the hierarchy a distinct subtree for each group of users; and
issuing keys to users from subtrees within the hierarchy upon the basis of their grouping,
wherein the at least two groups of users are defined upon the basis of a predetermined
policy which provides that users are grouped according to their perceived value to
a provider of the service, and
wherein a first user group having the highest perceived value to the provider are allocated
keys from a first subtree, and wherein keys from the first subtree share fewer
ancestors with keys from other subtrees than said keys from other subtrees share
with each other, and
wherein keys from the first subtree share only one ancestor with said keys from other
subtrees.

4. (Cancelled).

6. (Currently Amended) A method for security key management, the method comprising:

policy which provides that users are grouped according to a perceived
susceptibility of them ceasing to require the service, and a first user group having
the highest perceived susceptibility are allocated keys from a first subtree, and
wherein keys from the first subtree share fewer ancestors with keys from other
subtrees than said keys from other subtrees share with each other,

Claim 6 includes the following features of a method, which are not taught or further suggested and would not have been obvious over prior arts of record and these features are: the at least two groups of users are defined upon the basis of a predetermined policy which provides that users are grouped according to a perceived susceptibility of them ceasing to require the service, and a first user group having the highest perceived susceptibility are allocated keys from a first sub-tree, and wherein keys from the first sub-tree domain share fewer ancestors with keys from other sub-trees domains than said keys from other sub-trees domains share with each other; wherein keys from the first subtree share only one ancestor with said keys from other subtrees.
